Full Stack Developer (f/m/d)

Build the future of time tracking — One line of code at a time!
Join TimeTac as a Full-Stack Developer and make an impact by crafting powerful, scalable, and modern time tracking solutions. From enhancing APIs to creating sleek frontend experiences, you'll drive performance optimizations, build new features, and work in an agile environment where your code matters.

📍 **Graz**   🕐 **Full-time employee**

TimeTac is a continually growing and innovative software company with a focus on developing and providing web-based and mobile time tracking solutions. We maintain a modern, open corporate culture with a strong vision and a great working atmosphere in which creative thinking is encouraged. The products of TimeTac are among some of the leading cloud applications in the categories of time tracking and absence planning solutions.

Your future Role

- Develop and maintain backend and frontend services, primarily focusing on new features, performance improvements, and keeping our tech stack up to date.
- Ensure code quality and reliability by writing API and unit tests and reviewing code from team members.
- Contribute to continuous improvements in architecture and tooling, as we always strive to keep our stack modern and efficient.
- Monitor and optimize system performance, using tools like Prometheus, Elasticsearch, and Kibana to analyze logs and metrics.
- Shape technical decisions by actively participating in team discussions.
- Collaborate in an agile environment with a strong focus on continuous improvement.

Your Skills

- Possess over 4 years of professional experience in backend development with PHP **and** experience in frontend development with modern frameworks such as React or Angular.
- Previous experience with the Symfony framework is considered a nice-to-have.
- Proven experience in building and maintaining RESTful APIs using PHP and MySQL and preferably in developing frontend logic to consume those API.
- Strong advocate for test automation, with hands-on experience in writing API and unit tests.
- Skilled in refactoring, performance tuning, and software architecture to ensure maintainable and efficient code.
- Fluent in English, as it's our working language.
- Analytical thinking and continuously striving for the highest quality standards.
- Passion for coding and enjoyment in collaborating with a team.

Our Stack

- PHP (Symfony), MySQL, Redis – backend REST API development.
- Typescript, React, Redux, Tailwind, HTML and CSS – frontend web development.
- Codeception, PHPUnit – automated testing.
- Gitlab, Docker, Kubernetes – Continuous Integration und Deployment.
- Elasticsearch, Logstash, and Kibana (ELK stack), Prometheus – Monitoring.

We use git, JIRA, Slack and Google Workspace.

This may inspire you
